

EggCrown

Brand Guidelines · Logo System

Compiled May 2026 · for use across packaging, web, social and print.

01 · Logo Variants

The logo system contains six variants, each with both opaque (cream-background) and transparent versions where applicable. Use the right variant for each context.

Variant	File	Best for
Primary	eggcrown-primary.svg	Hero, packaging fronts, large-format print.
Horizontal	eggcrown-horizontal.svg	Web headers, email signatures, letterheads.
Mark only	eggcrown-mark.svg	App icons, social profile pictures, stamps, embroidery.
Wordmark	eggcrown-wordmark.svg	Footers, mentions, secondary placements without the mark.
Favicon	eggcrown-favicon.svg	Browser tabs, app store icons, very small contexts (16–256 px).
Monochrome	eggcrown-mono.svg	Embossing, single-color print, fax, overprint on photos.

Each variant ships in two flavors:

opaque — `eggcrown-<name>.svg`, with the cream background, for stand-alone use.

transparent — `eggcrown-<name>-clear.svg`, no background, for placement over photos, colored panels or other visuals.

02 · Color System

Five-color palette grounded in Pantone's 2026 Color of the Year (Cloud Dancer #F0EEE9). Use Cloud Dancer or pure white as default background. Never combine more than three of these colors in a single composition.

Hex	Name	Role
 #F0EEE9	Cloud Dancer	Default background
 #FAF6EB	Egg Light	Egg highlight zone
 #EDE3CF	Egg Mid	Egg body mid-tone
 #D8C9AB	Egg Dark	Egg shadow side
 #C9A788	Dusty Apricot	Primary accent (banner, fleurons)
 #7C6F5A	Driftwood	Secondary text & ornaments
 #2C2A26	Espresso	Primary type & ink

03 · Clear Space and Minimum Sizes

Clear space. Always leave a margin around the logo equal to the height of the lowercase 'g' in the wordmark. Never crowd the logo with other elements within that margin.

Minimum sizes. Each variant has a minimum render size below which it stops being legible:

Variant	Minimum width (px)	Minimum height (px)
Primary	320	248
Horizontal	480	152
Mark only	120	120
Wordmark	260	73
Favicon	16	16
Monochrome	320	248

04 · Do · Don't

- ✓ DO place transparent variants on photos and colored panels.
- ✗ DO use the cream background variant when no clear placement exists.
- ✓ DO use the monochrome variant for embossing and single-ink print.
- ✗ DO use the favicon below 64 px — the primary will not be readable.
- ✓ DON'T recolor the logo outside the documented palette.
- ✗ DON'T add drop shadows, glows or strokes around the placed logo.
- ✓ DON'T rotate, skew or stretch the logo in any way.
- ✗ DON'T crop the logo or remove individual elements (laurels, banner).
- ✓ DON'T place the logo on busy patterns without sufficient contrast.
- ✗ DON'T re-typeset the wordmark — always use the SVG.

05 • Implementation

Web (HTML/CSS)

Use the SVG directly with `<img src=...>` or inline. For favicons add to your `<head>`:

```
<link rel='icon' type='image/svg+xml' href='/eggcrown-favicon.svg'>
```

Print

Convert SVG to PDF or high-resolution PNG (300 DPI minimum) before sending to print. Use the monochrome variant for any single-ink process. For CMYK conversion of brand colors, ask the printer to match the hex codes in §02.

Social media

Profile pictures: **eggcrown-mark.svg** (square). Cover banners: **eggcrown-horizontal.svg**. Story / post graphics: any transparent variant placed over photo, with at least 8% width of clear space around the logo.

Packaging

Front-of-pack: **eggcrown-primary.svg** at minimum 60 mm width. Sides and back: **eggcrown-mono.svg** for single-ink overprint. Foil-stamped emblems: use vector path of **eggcrown-mark-clear.svg** (remove gradient and highlight ellipses before sending to die-cutter).
